

Diving with ROVs

A course specifically designed to introduce miniature Remotely Operated Vehicles to those involved in Recreational, Scientific or Media diving projects.

With advances in underwater technology driven by the offshore energy and military markets, it is now possible (and affordable) for relatively small-scale diving projects to benefit from miniature remotely operated camera systems.

This one-day course consists of classroom-based presentations followed by a hands-on waterside session with the ROV. The course can be delivered at clients premises, or alternatively at our comfortable training facilities.

Course Topics Include:

ROV Dive Planning
Briefing & Responsibilities
Dive site and equipment

Electrical Safety
Entanglement & Collision
Tether Handling

Surface Communications
Hand signals & responses

Equipment & Terminology
Diving with ROVs
Post-dive equipment care
